Measurement of cosmic ray flux with ECC on the ground

ICMaSS2017 30th Sep, 2017 at Nagoya University

Nobuko Kitagawa, Kunihiro Morishima, Akiara Nishio, Mitsuaki Kuno, Yuta Manabe (Nagoya Univ.)

Principle of muon radiography

Detect muons of various angles passing through matter, then reconstruct the 2D transmitted image by the number and angle distribution of detected muon

Motivation

- Understand the incident muon flux at the installation site
- Understand the systematics of muon flux model and our detector
- Calibrate a muon flux model

$$I(>E) = \frac{174}{5E\cos\theta + 400} (5E + 10\sec\theta)^{-1.57} \frac{E + 15}{E + 10 + 5\sec\theta} \quad (\text{cm}^{-2} \text{ s}^{-1} \text{ sr}^{-1})$$

S. Miyake: Int. Conf. Cosmic Rays (Denver) 5 (1973).

Try to observe the omniazimuth muon flux at the same time

Muon radiography for the pyramids of Egypt

Cosmic ray has been measured by 3 kinds of detectors inside and outside of the Khufu's pyramid. Analyzing the inner structure by the number and direction of penetrated muons.

Observation in front of the Khufu's Pyramid

Angle distribution of muon flux (A : horizontal setting)

Angle distribution of muon flux (B : vertical setting)

Angle distribution of muon flux (C : vertical setting)

Muon flux detected in chamber A

Comparison the flux of west side with east side

Combination of muon flux of 3 detectors

Flux of A and B at 45 degree at north side

Flux of A and C at 45 degree at west side

Combination of muon flux of 3 detectors

Need the efficiency correction for all angle and the alignment correction between each chamber for precise measurement

tanθ

100

flux

Conclusion

- Observed cosmic ray muons in front of the Khufu's Pyramid with the emulsion chambers (pair of emulsion films) for understanding the systematics of our detector and the muon flux model
- From our preliminary results,
 - confirmed the possibility of the observation of omniazimuth muon flux with emulsion chambers
 - observed the asymmetry between East and West ???

Should be done efficiency correction and alignment correction for each chamber

<Prospect>

Analyze ECCs installed at same location and add the information of momentum distribution
